Test Name		Value	Unit	Biological Reference interva
	ERYT	HROCYTE SEDIMEN	ATION RATE (ESR)	
	MENTATION RATE (ESR) RGREN AUTOMATED METHOD	34 <sup>H</sup>	mm/1st hr	0 - 20
by MODIFIED WESTE INTERPRETATION: 1. ESR is a non-speci immune disease, bui 2. An ESR can be affe as C-reactive proteir	<b>RGREN AUTOMATED METHOD</b> fic test because an elevated rest does not tell the health practit ected by other conditions beside	ult often indicates the pr ioner exactly where the i es inflammation. For this	esence of inflammation a nflammation is in the boo reason, the ESR is typical	ssociated with infection, cancer a

sed to monitor disease activity both of the above diseases as well as some others, such as systemic lupus erythematosus

## **CONDITION WITH LOW ESR**

A low ESR can be seen with conditions that inhibit the normal sedimentation of red blood cells, such as a high red blood cell count

(polycythaemia), significantly high white blood cell count (leucocytosis), and some protein abnormalities. Some changes in red cell shape (such as sickle cells in sickle cell anaemia) also lower the ESR.

## NOTE:

ESR and C - reactive protein (C-RP) are both markers of inflammation.
 Generally, ESR does not change as rapidly as does CRP, either at the start of inflammation or as it resolves.
 CRP is not affected by as many other factors as is ESR, making it a better marker of inflammation.
 If the ESR is elevated, it is typically a result of two types of proteins, globulins or fibrinogen.
 Women tend to have a higher ESR, and menstruation and pregnancy can cause temporary elevations.
 Drugs such as dextran methyldona oral contracentives penicillamine procainamide theophylline and vit

**KOS Diagnostic Lab** (A Unit of KOS Healthcare)

6. Drugs such as dextran, methyldopa, oral contraceptives, penicillamine procainamide, theophylline, and vitamin A can increase ESR, while aspirin, cortisone, and quinine may decrease it

3. CRP levels (Quantitative) has been used to assess activity of inflammatory disease, to detect infections after surgery, to detect transplant rejection, and to monitor these inflammatory processes.

4. As compared to ESR, CRP shows an earlier rise in inflammatory disorders which begins in 4-6 hrs, the intensity of the rise being higher than ESR and the recovery being earlier than ESR. Unlike ESR, CRP levels are not influenced by hematologic conditions like Anemia, Polycythemia etc., 5. Elevated values are consistent with an acute inflammatory process. NOTE:

1. Elevated C-reactive protein (CRP) values are nonspecific and should not be interpreted without a complete clinical history. 2. Oral contraceptives may increase CRP levels.
