HISTOPATHOLOGY

HISTOPATHOLOGY/BIOPSY SPECIMEN (SMALL)

TEST NAME:

HISTOPATHOLOGY/BIOPSY SPECIMEN

CLINICAL HISTORY (IF ANY):

Swelling in upper lip.

SPECIMEN INFORMATION/RECEIVED:

Biopsy.

GROSS EXAMINATION:

1. Received (in formalin) three whitish soft tissue fragments, aggregate measuring 1.2x0.9x0.4 cm.
2. Entire tissue is submitted for processing in 1 cassette.

MICROSCOPIC EXAMINATION:

Sections examined show a cellular basaloid neoplasm exhibiting multinodular architecture and basement membrane like material in the stroma. The tumor cells are arranged in closely packed tubules, some of which house basement membrane like material in the lumen. These cells have relatively monomorphic round to ovoid nuclei with uniformly distributed chromatin. No nuclear pleomorphism, mitosis or necrosis is identified.
