	ERYTH	IROCYTE SEDIMEN	TATION RATE (ES	R)	
	MENTATION RATE (ESR) RGREN AUTOMATED METHOD	48 <sup>H</sup>	mm/1st l	nr 0 - 20	
by MODIFIED WESTE INTERPRETATION:				ion associated with infection, cancer and aut e body or what is causing it. pically used in conjunction with other test su	

A low ESR can be seen with conditions that inhibit the normal sedimentation of red blood cells, such as a high red blood cell count

(polycythaemia), significantly high white blood cell count (leucocytosis), and some protein abnormalities. Some changes in red cell shape (such as sickle cells in sickle cell anaemia) also lower the ESR.

## NOTE:

ESR and C - reactive protein (C-RP) are both markers of inflammation.
 Generally, ESR does not change as rapidly as does CRP, either at the start of inflammation or as it resolves.

**KOS Diagnostic Lab** 

(A Unit of KOS Healthcare)

CRP is not affected by as many other factors as is ESR, making it a better marker of inflammation.
 If the ESR is elevated, it is typically a result of two types of proteins, globulins or fibrinogen.
 Women tend to have a higher ESR, and menstruation and pregnancy can cause temporary elevations.

6. Drugs such as dextran, methyldopa, oral contraceptives, penicillamine procainamide, theophylline, and vitamin A can increase ESR, while aspirin, cortisone, and quinine may decrease it

	2. CRP levels can incr	(CRP) is one of the most sensiti ease dramatically (100-fold or	ve acute-pnase rea more) after severe	e trauma, bacterial infection	n, inflammation, surgery, or neoplastic
1. C-reactive protein (CRP) is one of the most sensitive acute-phase reactants for inflammation. 2. CRP levels can increase dramatically (100-fold or more) after severe trauma, bacterial infection, inflammation, surgery, or neoplastic	proliferation.				fections after surgery to detect transplant

**KOS Diagnostic Lab** 

(A Unit of KOS Healthcare)

3. CRP levels (Quantitative) has been used to assess activity of inflammatory disease, to detect infections after surgery, to detect transplant rejection, and to monitor these inflammatory processes.

4. As compared to ESR, CRP shows an earlier rise in inflammatory disorders which begins in 4-6 hrs, the intensity of the rise being higher than ESR and the recovery being earlier than ESR. Unlike ESR, CRP levels are not influenced by hematologic conditions like Anemia, Polycythemia etc., 5. Elevated values are consistent with an acute inflammatory process. NOTE:

1. Elevated C-reactive protein (CRP) values are nonspecific and should not be interpreted without a complete clinical history. 2. Oral contraceptives may increase CRP levels.
