|   |   | VITAMIN B12/CC              |  |  |  |
| VITAMIN B12/COBALAMIN: SERUM<br>by CMIA (CHEMILUMINESCENT MICROPARTICLE<br>IMMUNOASSAY)<br>INTERPRETATION:- |   | 108 <sup>L</sup>            | pg/mL  | 190.0 - 890.0  |  |
| INCREASED VITAMIN B12   |   |                             | DECREASED VITAMIN B12  |  |  |
| 1.Ingestion of Vitamin C  |   | 1.Pregnancy                 |  |  |  |
| 2.Ingestion of Estrogen   |   |                             | 2.DRUGS:Aspirin, Anti-convulsants, Colchicine                      |  |  |
| 3.Ingestion of Vitamin A  |   | 3.Ethanol Igestion          |  |  |  |
| 4.Hepatocellular injury   |   |                             | 4. Contraceptive Harmones  |  |  |
| 5.Myeloproliferative disorder   |   |                             | 5.Haemodialysis  |  |  |
| 6.Uremia  |   |                             | 6. Multiple Myeloma  |  |  |
| 2.In humans, it is obt  | lamin) is necessary for hemato<br>tained only from animal protei<br>itamin B12 stores very econom | ns and requires intrinsic f | actor (IF) for absorp  | tion.<br>and returning it to the liver; very little is |  |

4. Vitamin B12 deficiency may be due to lack of IF secretion by gastric mucosa (eg, gastrectomy, gastric atrophy) or intestinal malabsorption (eg, ileal resection, small intestinal diseases).

5. Vitamin B12 deficiency frequently causes macrocytic anemia, glossitis, peripheral neuropathy, weakness, hyperreflexia, ataxia, loss of proprioception, poor coordination, and affective behavioral changes. These manifestations may occur in any combination; many patients have the neurologic defects without macrocytic anemia.

6.Serum methylmalonic acid and homocysteine levels are also elevated in vitamin B12 deficiency states.

7.Follow-up testing for antibodies to intrinsic factor (IF) is recommended to identify this potential cause of vitamin B12 malabsorption. **NOTE:**A normal serum concentration of vitamin B12 does not rule out tissue deficiency of vitamin B12. The most sensitive test for vitamin B12 deficiency at the cellular level is the assay for MMA. If clinical symptoms suggest deficiency, measurement of MMA and homocysteine should be considered, even if serum vitamin B12 concentrations are normal.
