CLINICAL CHEMISTRY/BIOCHEMISTRY

LITHIUM

LITHIUM: SERUM by ISE (ION SELECTIVE ELECTRODE)	1.17	mmol/L	0.30 - 1.50
--	------	--------	-------------

INTERPRETATION:

Therapeutic	mmol/L	0.6 - 1.2
Potentially toxic	mmol/L	1.5 - 2.5
Severely toxic	mmol/L	> 2.5

- 1.Serum Lithium levels are useful for monitoring therapy of patients with bipolar disorders, including recurrent episodes of mania and depression and for evaluation of toxicity
- 2.Lithium alters the intraneuronal metabolism of catecholamines by an unknown mechanism. It is used to suppress the manic phase of manic-depressive psychosis.
- 3.Lithium is distributed throughout the total water spaces of the body and is excreted primarily by the kidney.
- 4.Toxicity from lithium salts leads to ataxia, slurred speech, and confusion.
- 5.Since the concentration of lithium in the serum varies with the time after the dose, blood for lithium determination should be drawn at a standard time, preferably 8 to 12 hours after the last dose (trough values).

NOTE:-Values above 1.6 mmol/L (trough values) are generally considered toxic and are indicative of dose modulation.
