DIRECT COOMBS TEST (DCT)

DIRECT COOMBS TEST (DCT)	NEGATIVE (-ve)	NEGATIVE (-ve)
--------------------------	----------------	----------------

Interpretation:-

The direct Coombs test (also known as the **direct antiglobulin test** or DAT) is used to detect if antibodies or complement system factors have bound to RBC surface antigens *in vivo*.

The direct Coombs test is used clinically when immune-mediated hemolytic anemia (antibody-mediated destruction of RBCs) is suspected. This mechanism could be autoimmunity, alloimmunity or a drug-induced immune-mediated mechanism.
