NAME	: Mr. RAJINDER KUMAR DI	HMAN			
AGE/ GENDER	: 74 YRS/MALE	PAT	IENT ID	: 1736131	
COLLECTED BY	: SURJESH	REG. NO./LAB NO.		: 012501270039	
REFERRED BY	:	REGISTRATION DATE		: 27/Jan/2025 12:07 PM	
BARCODE NO.	:01524510	COL	LECTION DATE	: 27/Jan/2025 12:07PM	
CLIENT CODE.	: KOS DIAGNOSTIC LAB		ORTING DATE	: 27/Jan/2025 01:45PM	
CLIENT ADDRESS		IOLSON ROAD, AMBALA CANTT			
Test Name		Value	Unit	Biological Reference interval	
	GL	HAEMATO YCOSYLATED HAEMO			
GLYCOSYLATED HAEMOGLOBIN (HbA1c): WHOLE BLOOD by HPLC (HIGH PERFORMANCE LIQUID CHROMATOGRAPHY)		6.3	%	4.0 - 6.4	
ESTIMATED AVERAGE PLASMA GLUCOSE by HPLC (HIGH PERFORMANCE LIQUID CHROMATOGRAPHY) INTERPRETATION:		134.11	mg/dL	60.00 - 140.00	
	AS PER AMERICAN DI	ABETES ASSOCIATION (ADA)			
REFERENCE GROUP) HEMOGLOGIB (HBAIC) in	%	
Non diabetic Adults >= 18 years			<5.7		
	Risk (Prediabetes)		5.7 – 6.4		
Diagnosing Diabetes			>= 6.5		
Therapeutic goals for glycemic control			Age > 19 Years		
		Goals of Therapy: Actions Suggested:	< 7.0 >8.0		
			Age < 19 Years		

1.Glycosylated hemoglobin (HbA1c) test is three monthly monitoring done to assess compliace with therapeutic regimen in diabetic patients.

2. Since Hb1c reflects long term fluctuations in blood glucose concentration, a diabetic patient who has recently under good control may still have high concentration of HbAlc. Converse is true for a diabetic previously under good control but now poorly controlled.

3. Target goals of < 7.0 % may be beneficial in patients with short duration of diabetes, long life expectancy and no significant cardiovascular disease. In patients with significant complications of diabetes, limited life expectancy or extensive co-morbid conditions, targetting a goal of < 7.0% may not be appropiate. 4.High

HbA1c (>9.0 -9.5 %) is strongly associated with risk of development and rapid progression of microvascular and nerve complications

5.Any condition that shorten RBC life span like acute blood loss, hemolytic anemia falsely lower HbA1c results.

6.HbA1c results from patients with HbSS,HbSC and HbD must be interpreted with caution, given the pathological processes including anemia, increased red cell turnover, and transfusion requirement that adversely impact HbA1c as a marker of long-term gycemic control.

7.Specimens from patients with polycythemia or post-splenctomy may exhibit increse in HbA1c values due to a somewhat longer life span of the red cells.
