

		hopra & Microbiology) nsultant Pathologist	Dr. Yugan MD CEO & Consultant	(Pathology)	
NAME	: Mr. ANIL RANA				
AGE/ GENDER	: 57 YRS/MALE	PATI	ENT ID	: 1645646	
COLLECTED BY	:	REG.	NO./LAB NO.	: 012502140001	
<b>REFERRED BY</b>	:	REGI	STRATION DATE	: 14/Feb/2025 06:06 AM	
BARCODE NO.	:01525472	COLI	ECTION DATE	: 14/Feb/2025 06:07AM	
CLIENT CODE.	: KOS DIAGNOSTIC LAB	REPO	DRTING DATE	: 16/Feb/2025 08:25AM	
CLIENT ADDRESS	: 6349/1, NICHOLSON ROAD	, AMBALA CANTT			
Test Name		Value	Unit	<b>Biological Reference interval</b>	
		MICROBIO	LOGY		
	CULTURE AEROBIC	C BACTERIA AND A	NTIBIOTIC SEN	SITIVITY: URINE	
CULTURE AND SU	SCEPTIBILITY: URINE				
DATE OF SAMPLE 14-02		14-02-2025			
SPECIMEN SOURCE		URINE	URINE		
INCUBATION PERI		48 HOURS			
CULTURE		STERILE			

KOS Diagnostic Lab (A Unit of KOS Healthcare)

NO AEROBIC PYOGENIC ORGANISM GROWN AFTER 48 HOURS OF INCUBATION AT 37\*C

## **AEROBIC SUSCEPTIBILITY: URINE**

by AUTOMATED BROTH CULTURE

by AUTOMATED BROTH CULTURE

## **INTERPRETATION:**

ORGANISM

In units culture and sensitivity, presence of more than 100,000 organism per mL in midstream sample of urine is considered clinically significant. However in symptomatic patients, a smaller number of bacteria (100 to 10000/mL) may signify infection.
 Colony count of 100 to 10000/ mL indicate infection, if isolate from specimen obtained by suprapubic aspiration or "in-and-out" catheterization or from patients with indwelling catheters.

## SUSCEPTIBILITY:

 A test interpreted as SENSTITIVE implies that infection due to isolate may be appropriately treated with the dosage of an antimicrobial agent recommended for that type of infection and infecting species, unless otherwise indicated..
 A test interpreted as INTERMEDIATE implies that the" Infection due to the isolate may be appropriately treated in body sites where the drugs are

A test interpreted as **INTERMEDIATE** implies that the "Infection due to the isolate may be appropriately treated in body sites where the drugs are physiologically concentrated or when a high dosage of drug can be used".
 A test interpreted as **RESISTANT** implies that the "isolates are not inhibited by the usually achievable concentration of the agents with normal

3.A test interpreted as **RESISTANT** implies that the "isolates are not inhibited by the usually achievable concentration of the agents with normal dosage, schedule and/or fall in the range where specific microbial resistance mechanism are likely (e.g. beta-lactamases), and clinical efficacy has not been reliable in treatment studies.

## CAUTION:

Conditions which can cause a false Negative culture:

1. Patient is on antibiotics. Please repeat culture post therapy.

2. Anaerobic bacterial infection.

- 3. Fastidious aerobic bacteria which are not able to grow on routine culture media
- 4. Besides all these factors, at least in 25-40 % of cases there is no direct correlation between in vivo clinical picture.
- 5. Renal tuberculosis to be confirmed by AFB studies.
