COLISTIN by AUTOMATED BRO Concentration: 0.06 µ	<i>TH MICRODILUTION, CLSI</i> Ig/mL	SENSITIVE		
2. Colony count of 10	d sensitivity, presence of more t in symptomatic patients , a smal 0 to 10000/ mL indicate infectio m patients with indwelling cathe	on, if isolate from specim	er mL in midstream 100 to 10000/mL) m en obtained by sup	a sample of urine is considered clinically hay signify infection. rapubic aspiration or "in-and-out"

SUSCEPTIBILITY:

1. A test interpreted as **SENSTITIVE** implies that infection due to isolate may be appropriately treated with the dosage of an antimicrobial agent 2. A test interpreted as **INTERMEDIATE** implies that the" Infection due to the isolate may be appropriately treated in body sites where the drugs are

physiologically concentrated or when a high dosage of drug can be used". 3.A test interpreted as **RESISTANT** implies that the "isolates are not inhibited by the usually achievable concentration of the agents with normal

dosage, schedule and/or fall in the range where specific microbial resistance mechanism are likely (e.g. beta-lactamases), and clinical efficacy has not been reliable in treatment studies.

*** End Of Report ***

CAUTION:

Conditions which can cause a false Negative culture: 1. Patient is on antibiotics. Please repeat culture post therapy.

2. Anaerobic bacterial infection.

3. Fastidious aerobic bacteria which are not able to grow on routine culture media.

4. Besides all these factors, at least in 25-40 % of cases there is no direct correlation between in vivo clinical picture.

5. Renal tuberculosis to be confirmed by AFB studies.
