Test Name		Value	Unit	Biological Reference interval
	IN	MUNOPATHOLO		
		C-REACTIVE PRO	DIEIN (CRP)	
C-REACTIVE PROTEIN (CRP) QUANTITATIVE: 0.4 SERUM		0.53	mg/L	0.0 - 6.0
INTERPRETATION:				
1. C-reactive protein 2. CRP levels can incr	(CRP) is one of the most sensiti ease dramatically (100-fold or	ive acute-phase reactant more) after severe trau	s for inflammation. ma, bacterial infection	n, inflammation, surgery, or neoplastic
proliferation.	5.			0 0 1
3. CRP levels (Quanti rejection and to more	tative) has been used to assess nitor these inflammatory proce	activity of inflammatory	disease, to detect inf	fections after surgery, to detect transplant rs, the intensity of the rise being higher than
- cjection, and to mor	into incos initialinitatory proce	3303.		

4. As compared to ESR, CRP shows an earlier rise in inflammatory disorders which begins in 4-6 hrs, the intensity of the rise being higher than ESR and the recovery being earlier than ESR. Unlike ESR, CRP levels are not influenced by hematologic conditions like Anemia, Polycythemia etc., 5. Elevated values are consistent with an acute inflammatory process.

1. Elevated C-reactive protein (CRP) values are nonspecific and should not be interpreted without a complete clinical history.

2. Oral contraceptives may increase CRP levels.

CLIENT CODE. : P.K.R JAIN HEALTHCARE IN		INSTITUTE REPORTING DATE		:08/Aug/2024 12:36PM
CLIENT ADDRESS	: NASIRPUR, HISSAR ROAD, AMB	ALA CITY - HARYA	NA	
Test Name		Value	Unit	Biological Reference interval
	WID	AL SLIDE AGGL	JTINATION TEST	
SALMONELLA TYPHI		AL SLIDE AGGLI	JTINATION TEST TITRE	1 : 80
by SLIDE AGGLUTINA	Ο	NIL	TITRE	
by SLIDE AGGLUTINA SALMONELLA TYPHI	О <i>пом</i> Н			1 : 80 1 : 160
by SLIDE AGGLUTINA SALMONELLA TYPHI by SLIDE AGGLUTINA	0 тюм Н тюм	NIL NIL	TITRE TITRE	1 : 160
by SLIDE AGGLUTINA SALMONELLA TYPHI by SLIDE AGGLUTINA SALMONELLA PARA	O TION H TION TYPHI AH	NIL	TITRE	
by SLIDE AGGLUTINA SALMONELLA TYPHI by SLIDE AGGLUTINA	O TION H TION TYPHI AH TION	NIL NIL	TITRE TITRE	1 : 160

INTERPRETATION:

1. Titres of 1:80 or more for "O" agglutinin is considered significant.

2. Titres of 1:160 or more for "H" agglutinin is considered significant.

LIMITATIONS:

1. Agglutinins usually appear by 5th to 6th day of illness of enteric fever, hence a negative result in early stage is inconclusive. The titre then rises till 3rd or 4th week, after which it declines gradually.

2.Lower titres may be found in normal individuals.

3.A single positive result has less significance than the rising agglutination titre, since demonstration of rising titre four or more in 1st and 3rd week is considered as a definite evidence of infection.

4.A simultaneous rise in H agglutinins is suggestive of paratyphoid infection.

NOTE:

1. Individuals with prior infection or immunization with TAB vaccine may develop an ANAMNESTIC RESPONSE (False-Positive) during an unrelated fever i.e High titres of antibodies to various antigens. This may be differentiated by repitition of the test after a week.

2. The anamnestic response shows only a transient rise, while in enteric fever rise is sustained.

3.H agglutinins tend to persist for many months after vaccination but O agglutinins tend to disappear sooner i.e within 6 months. Therefore rise in Oagglutinins indicate recent infection.
