CLIENT ADDRESS	: NASIRPUR, HISSAR ROAD, AM	MBALA CITY - HARYA	NA	
Test Name		Value	Unit	Biological Reference interval
	ERYTH	IROCYTE SEDIMEN	NTATION RATE (ESR)
	MENTATION RATE (ESR)	31 ^H	mm/1st h	r 0-20
by RED CELL AGGRE	GATION BY CAPILLARY PHOTOMET	RY		
1. ESR is a non-specif	ic test because an elevated resul	t often indicates the	presence of inflammation	on associated with infection, cancer and auto
immune disease, but	does not tell the health practition	ner exactly where the	e inflammation is in the	body or what is causing it. ically used in conjunction with other test suc
as C-reactive protein	cted by other conditions besides		is reason, the Lok is typ	ically used in conjunction with other test suc
3. This test may also	be used to monitor disease activ	ity and response to th	herapy in both of the ab	ove diseases as well as some others, such as
systemic lupus erythe				
A low ESR can be see	en with conditions that inhibit the	e norma <mark>l sedimentatio</mark>	o <mark>n of red</mark> blood cells, su	ch as a high red blood cell count
(polycythaemia), sigr	nificantly high white blood cell co le cell anaemia) also lower the E	ount (leucocytosis) , a	nd some protein abnor	malities. Šome changes in red cell shape (su
NOTE:	e cen anaenna) also lower the E	эк.		
1. ESR and C - reactiv	e protein (C-RP) are both markers	s of inflammation.		

2. Generally, ESR does not change as rapidly as does CRP, either at the start of inflammation or as it resolves.

 3. CRP is not affected by as many other factors as is ESR, making it a better marker of inflammation.
4. If the ESR is elevated, it is typically a result of two types of proteins, globulins or fibrinogen.
5. Women tend to have a higher ESR, and menstruation and pregnancy can cause temporary elevations.
6. Drugs such as dextran, methyldopa, oral contraceptives, penicillamine procainamide, theophylline, and vitamin A can increase ESR, while environment of a structure of the start of aspirin, cortisone, and quinine may decrease it

						DIABETIC: > 0R = 200.0
IN ACCORDANCE WITH AMERICAN DIABETES ASSOCIATION GUIDELINES: 1. A random plasma glucose level below 140 mg/dl is considered normal.		2. A random glucose	level between 140 - 200 mg/dl i	s consid <mark>ered as glu</mark>	icose intolerant or prediat	petic. A fasting and post-prnadial blood tes

(after consumption of 75 gms of glucose) is recommended for all such patients.
3. A random glucose level of above 200 mg/dl is highly suggestive of diabetic state. A repeat post-prandial is strongly recommended for all such patients. A fasting plasma glucose level in excess of 125 mg/dl on both occasions is confirmatory for diabetic state.
