Test Name	Value	e Unit	Biological Reference interval
	Н	AEMATOLOGY	
	ERYTHROCYTE	SEDIMENTATION RATE (ES	R)
ERYTHROCYTE SEDI	MENTATION RATE (ESR) 5	mm/1st h	nr 0 - 20
by RED CELL AGGRE	GATION BY CAPILLARY PHOTOMETRY		
 ESR is a non-specif immune disease, but 	does not tell the health practitioner exactly	where the inflammation is in the	ion associated with infection, cancer and auto e body or what is causing it.
2. An ESR can be affe as C-reactive protein	cted by other conditions besides inflammati	on. For this reason, the ESR is ty	pically used in conjunction with other test suc
3. This test may also systemic lupus erythe	be used to monitor disease activity and resp	<mark>onse to therapy in</mark> both of the a	bove diseases as well as some others, such as
CONDITION WITH LO	N ESR		
A low ESR can be see	n with conditions that inhibit the normal sec	dimentation of red blood cells, s	uch as a high red blood cell count rmalities. Some changes in red cell shape (su
as sickle cells in sickl	e cell anaemia) also lower the ESR.		i maintes. Some changes in red cen shape (su
NOTE: 1 ESP and C reactiv	e protein (C-RP) are both markers of inflamn	nation	
2. Generally, ESR doe	s not change as rapidly as does CRP, either a	at the start of inflammation or as	s it resolves.
3. CRP is not affected	by as many other factors as is ESR, making it ed, it is typically a result of two types of pro	a better marker of inflammation	1.
Women tend to ha	ve a higher ESR, and menstruation and pregr	nancy can cause temporary eleva	itions.
4 Drugs such as dayt	ran mothyldona oral contracontivos nonis	illaming proceinamide theophy	lling and vitamin A can increase ESD while

Drugs such as dextran, methyldopa, oral contraceptives, penicillamine procainamide, theophylline, and vitamin A can increase ESR, while aspirin, cortisone, and quinine may decrease it

betic. A fasting and post-prandial bioou

A fasting plasma glucose level between 100 - 125 mg/dl is considered as glucose intolerant or prediabetic. A fasting and post-prandial blood test (after consumption of 75 gms of glucose) is recommended for all such patients.
 A fasting plasma glucose level of above 125 mg/dl is highly suggestive of diabetic state. A repeat post-prandial is strongly recommended for all such patients. A fasting plasma glucose level in excess of 125 mg/dl on both occasions is confirmatory for diabetic state.
