Long standing un-treated Diabetes and Hypertension can lead to renal dysfunction. 2. Diabetic nephropathy or kidney disease is the most common cause of end stage renal disease(ERSD) or kidney failure. 3. Presence of Microalbuminuria is an early indicator of onset of compromised renal function in these patients. 4. Microalbuminuria is the condition when urinary albumin excre tion is between 30-300 mg & above this it is called as macroalbuminuria, the presence of which indicator socious kidney disease. presence of which indicates serious kidney disease.

5. Microalbuminuria is not only associated with kidney disease but of cardiovascular disease in patients with dibetes & hypertension.

6. Microalbuminuria reflects vascular damage & appear to be a marker of of early arterial disease & endothelial dysfunction. NOTE:- IF A PATIENT HAS = 1+ PROTEINURIA (30 mg/d) OR 300 mg/L) BY URINE DIPSTICK (URINEANALYSIS), OVERT PROTEINURIA IS PRESENT AND

TESTING FOR MICROALBUMIN IS INAPPROPIÀTE. IŇ SUCH A CASE, URINE PROTEIN:CREATÌNINE RATIO OR 24 HOURS TOTAL URINE MICROPROTEIN IS APPROPIATE
