3. Target goals of < 7.0 % may be beneficial in patients with short duration of diabetes, long life expectancy and no significant cardiovascular disease. In patients with significant complications of diabetes, limited life expectancy or extensive co-morbid conditions, targetting a goal of < 7.0% may not be appropriate.

4. High HbA1c (>9.0 -9.5 %) is strongly associated with risk of development and rapid progression of microvascular and nerve complications 5. Any condition that shorten RBC life span like acute blood loss, hemolytic anemia falsely lower HbA1c results.

6.HbA1c results from patients with HbSS,HbSC and HbD must be interpreted with caution, given the pathological processes including anemia, increased red cell turnover, and transfusion requirement that adversely impact HbA1c as a marker of long-term gycemic control.

7.Specimens from patients with polycythemia or post-splenctomy may exhibit increse in HbA1c values due to a somewhat longer life span of the red cells.

	CLINIC	AL CHEMISTRY	/BIOCHEMIS	TRY		
		AL CHEMISTRY FASTING (F) AND				
GLUCOSE FASTING	GLUCOSE G (F): PLASMA			AL (PP) NORMAL: < 100.0		
	GLUCOSE	FASTING (F) AND	POST PRANDL	AL (PP)		
by GLUCOSE OXIDASE	GLUCOSE G (F): PLASMA - PEROXIDASE (GOD-POD) ANDIAL (PP): PLASMA	FASTING (F) AND	POST PRANDL	AL (PP) NORMAL: < 100.0 PREDIABETIC: 100.0 - 125.0		
by GLUCOSE OXIDASE	GLUCOSE G (F): PLASMA - PEROXIDASE (GOD-POD)	FASTING (F) AND 136.3 ^H	POST PRANDLA mg/dL	AL (PP) NORMAL: < 100.0 PREDIABETIC: 100.0 - 125.0 DIABETIC: > 0R = 126.0 NORMAL: < 140.00 PREDIABETIC: 140.0 - 200.0		
by GLUCOSE OXIDASE	GLUCOSE G (F): PLASMA - PEROXIDASE (GOD-POD) ANDIAL (PP): PLASMA	FASTING (F) AND 136.3 ^H	POST PRANDLA mg/dL	AL (PP) NORMAL: < 100.0 PREDIABETIC: 100.0 - 125.0 DIABETIC: > 0R = 126.0 NORMAL: < 140.00		

2. A fasting plasma glucose level between 100 - 125 mg/dl and post-prandial plasma glucose level between 140 – 200 mg/dL is considered as glucose intolerant or pre diabetic. A fasting and post-prandial blood test (after consumption of 75 gms of glucose) is recommended for all such patients.

3. A fasting plasma glucose level of above 125 mg/dL and post-prandial plasma glucose level above 200 mg/dL is highly suggestive of diabetic state. A repeat post-prandial is strongly recommended for all such patients. A fasting plasma glucose level in excess of 125 mg/dl on both occasions is confirmatory for diabetic state.
