Down's	Syndron	ne Risk									
The calculated risk for Trisomy 21 is below the cut off which represents a low risk. After the result of the Trisomy 21 test it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!											
Noural tubo dofacto rick											
Neural tube defects risk The corrected MoM AFP (1.60) is located in the low						Risk for trisomy					
	ected Mo			ated in the low		The calculated ris indicates a low ris		isomy 18	is < 1:10000, which		

below cut off	Below Cut Off, but above Age Risk	above cut off	Prisca 5.2.0.13
