**Interpretation**

The sample was washed and processed for karyotyping, but analyzable metaphases were not available for karyotyping. Sample was recultured. However, similar results were obtained. The karyotype report is not possible due to nonavailability of quality metaphases.

If possible, kindly send repeat sample for testing.

*Limitation: Low grade clonal rearrangements and/or the presence of submicroscopic or cryptic abnormalities may not be evident on conventional karyotyping.  
Correlation of chromosomal study with clinical & molecular findings is recommended.*
