Age risk at term

1:916

## **Down's Syndrome Risk**

The calculated risk for Trisomy 21 is below the cut off which represents a low risk.

After the result of the Trisomy 21 test it is expected that among 6158 women with the same data, there is one woman with a trisomy 21 pregnancy and 6157 women with not affected pregnancies.

The risk for this twin pregnancy has been calculated for a singleton pregnancy with corrected MoMs.

The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician.

Please note that risk calculations are statistical approaches and have no diagnostic value!

| isk for trisomy 18   |
|--|
| he calculated risk for trisomy 18 is < 1:10000, which idicates a low risk. |
