Down's	Syndror	ne Risk								
The calculated risk for Trisomy 21 is below the cut off which represents a low risk. After the result of the Trisomy 21 test it is expected that among 4742 women with the same data, there is one woman with a trisomy 21 pregnancy and 4741 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!										
Neural tube defects risk					Risk for trisomy 18					
The corrected MoM AFP (0.75) is loc risk area for neural tube defects.				ated in the low	The calculated ris indicates a low ris		my 18 is < 1:10000, which			

	below cut off	Below Cut Off, but above Age Risk	above cut off	Prisca 5.2.0.13
