| <p>The graph shows age risk on the y-axis (1:10000 to 1:10) and age on the x-axis (1315 to 4749). A curve represents the calculated risk. A vertical line at age 29.5 indicates a risk below the cut-off.</p> | | <p>The calculated risk for Trisomy 21 is below the cut off which represents a low risk. After the result of the Trisomy 21 test it is expected that among 638 women with the same data, there is one woman with a trisomy 21 pregnancy and 637 women with not affected pregnancies. The free beta HCG level is high. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p> | | |
| Trisomy 13/18 | | | | |
| <p>The calculated risk for trisomy 13/18 is < 1:10000, which indicates a low risk.</p> | | | | |
