Risks at sampling date				
Age risk at sampling date	1:831	Trisomy 21	1:7939	
Overall population risk	1:600	Trisomy 13/18	<1:10000	
Risk		Trisomy 21		
<p>The graph plots risk (1:10000 to 1:10) against age (13 to 49). A diagonal line labeled 'Cutoff' separates the risk into three zones: green (below cutoff), yellow (below cutoff but above age risk), and red (above cutoff). A vertical bar at age 27 indicates the patient's risk is in the green zone.</p>		<p>The calculated risk for Trisomy 21 is below the cut off which represents a low risk. After the result of the Trisomy 21 test it is expected that among 7939 women with the same data, there is one woman with a trisomy 21 pregnancy and 7938 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p>		
Trisomy 13/18				
<p>The calculated risk for trisomy 13/18 is < 1:10000, which indicates a low risk.</p>
