<p>The graph plots risk against age (13 to 49). A horizontal line at 1:1000 represents the age risk. A curve represents the calculated risk. A horizontal line labeled 'Cutoff' is at approximately 1:10000. The area below the cutoff is green, the area between the cutoff and the age risk line is yellow, and the area above the cutoff is red.</p>	<p>The calculated risk for Trisomy 21 is below the cut off which represents a low risk.</p> <p>After the result of the Trisomy 21 test it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p>			
Trisomy 13/18				
<p>The calculated risk for trisomy 13/18 is < 1:10000, which indicates a low risk.</p>
