<p>The graph plots risk (1:10000 to 1:10) against age (13 to 49). A diagonal line labeled 'Cutoff' separates the green area (below cutoff) from the yellow (between cutoff and age risk) and red (above cutoff) areas.</p>	<p>The calculated risk for Trisomy 21 is below the cut off which represents a low risk. After the result of the Trisomy 21 test it is expected that among 1594 women with the same data, there is one woman with a trisomy 21 pregnancy and 1593 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p>			
	<p>The calculated risk for trisomy 13/18 is < 1:10000, which indicates a low risk.</p>
