<p>The graph plots risk (1:10000 to 1:10) against age (13 to 49). A vertical line at age 24.4 indicates the patient's risk, which is below the red 'Cutoff' line. The area below the cutoff is divided into green (below age risk) and yellow (between age risk and cutoff).</p>		<p>The calculated risk for Trisomy 21 is below the cut off which represents a low risk.</p> <p>After the result of the Trisomy 21 test it is expected that among 413 women with the same data, there is one woman with a trisomy 21 pregnancy and 412 women with not affected pregnancies.</p> <p>The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p>
