Risk		Trisomy 21		
<p>The graph plots risk (y-axis, 1:1000 to 1:10) against age (x-axis, 13 to 49). A red area above the cutoff line indicates high risk, a yellow area below the cutoff line indicates low risk, and a green area below the yellow area indicates very low risk. The patient's risk is shown as a vertical bar at age 29.2, which is below the cutoff line.</p>		<p><b>The calculated risk for Trisomy 21 is below the cut off which represents a low risk.</b> After the result of the Trisomy 21 test it is expected that among 3477 women with the same data, there is one woman with a trisomy 21 pregnancy and 3476 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p>		
Trisomy 13/18				
<p><b>The calculated risk for trisomy 13/18 is &lt; 1:10000, which indicates a low risk.</b></p>
