| | | | Qualifications in measuring NT |
| Risks at sampling date | | Trisomy 21 | |
| Age risk | 1:959 | The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. | |
| Biochemical T21 risk | 1:546 | After the result of the Trisomy 21 test (with NT) it is expected that among 3312 women with the same data, there is one woman with a trisomy 21 pregnancy and 3311 women with not affected pregnancies. | |
| Combined trisomy 21 risk | 1:3312 | The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. | |
| Trisomy 13/18 + NT | <1:10000 | Please note that risk calculations are statistical approaches and have no diagnostic value! | |
| | | The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). | |
| | | The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value! | |
