Risk		Trisomy 21		
<p>The graph plots risk against age. The y-axis shows risk ratios: 1:10000, 1:1000, 1:250, 1:100, 1:10. The x-axis shows age from 13 to 49. A diagonal line labeled 'Cutoff' separates the 'below cut off' (green) area from the 'above cut off' (red) area. A yellow area is also present between 1:1000 and 1:250 risk levels.</p>		<p>The calculated risk for Trisomy 21 is below the cut off which represents a low risk. After the result of the Trisomy 21 test it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p>		
Trisomy 13/18				
<p>The calculated risk for trisomy 13/18 is < 1:10000, which indicates a low risk.</p>
