Risks at sampling date				
Age risk at sampling date	1:1074	Trisomy 21	1:546	
Overall population risk	1:600	Trisomy 13/18	1:4160	
Risk		Trisomy 21		
<p>The graph plots risk (y-axis, 1:10000 to 1:10) against age (x-axis, 13 to 49). A vertical bar at age 29 indicates the patient's age risk (1:10000). A diagonal line represents the cutoff. The area below the cutoff is green, the area between the cutoff and the age risk bar is yellow, and the area above the cutoff is red.</p>		<p><b>The calculated risk for Trisomy 21 is below the cut off which represents a low risk.</b> After the result of the Trisomy 21 test it is expected that among 547 women with the same data, there is one woman with a trisomy 21 pregnancy and 546 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p>		
Trisomy 13/18				
<p><b>The calculated risk for Trisomy 13/18 is 1:4160, which indicates a low risk.</b></p>
