KOS DIAGNOSTIC LAB

| Patient data   |                  | Ultrasound data  |                                 |           |
|--|------------------|--|---------------------------------|-----------|
| Name   | MRS. ANJU SHARMA | Gestational age at sample date   | 13 + 3                          |           |
| Birthday   | 24-06-1991       | Method   | LMP                             |           |
| Age at sample date   | 27.0             | Scan date  |                                 |           |
| Patient ID   | 101901270033     |  |                                 |           |
| Correction factors   |                  |  |                                 |           |
| Fetuses  | 1 VF             | no   | Previous trisomy 21 pregnancies | no        |
| Weight in kg   | 65 diabetes      | no   |                                 |           |
| Smoker   | no Origin        | Asian  |                                 |           |
| Pregnancy data   |                  | Parameter  | Value                           | Corr. MoM |
| Sample Date  | 25-01-2019       | PAPP-A   | 2.83mIU/ml                      | 0.76      |
|  |                  | fb-hCG   | 37.8 ng/ml                      | 1.11      |
| Risks at sampling date   |                  |  |                                 |           |
| Age risk at sampling date  | 1:845            | Trisomy 21   | 1:2260                          |           |
| Overall population risk  | 1:600            | Trisomy 13/18  | <1:10000                        |           |
| Risk   |                  | Trisomy 21   |                                 |           |
| <p>The graph shows age risk on the y-axis (1:1000 to 1:10) and age on the x-axis (13 to 49). A diagonal line labeled 'Cutoff' separates the risk levels. The area below the cutoff is divided into three zones: green (below 1:1000), yellow (1:1000 to 1:250), and red (1:250 to 1:10).</p> |                  | <p><b>The calculated risk for Trisomy 21 is below the cut off which represents a low risk.</b></p> <p>After the result of the Trisomy 21 test it is expected that among 2260 women with the same data, there is one woman with a trisomy 21 pregnancy and 2259 women with not affected pregnancies.</p> <p>The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p> |                                 |           |
| Trisomy 13/18  |                  |  |                                 |           |
| <p><b>The calculated risk for trisomy 13/18 is &lt; 1:10000, which indicates a low risk.</b></p>   |                  |  |                                 |           |
