<p>The graph shows age risk on the y-axis (1:10000 to 1:10) and age on the x-axis (13 to 49). A diagonal line represents the cutoff. The area below the cutoff is green, the area between the cutoff and the age risk curve is yellow, and the area above the age risk curve is red. A vertical bar at age 26.0 shows the patient's risk is below the cutoff.</p>		<p><b>The calculated risk for Trisomy 21 is below the cut off which represents a low risk.</b></p> <p>After the result of the Trisomy 21 test it is expected that among 547 women with the same data, there is one woman with a trisomy 21 pregnancy and 546 women with not affected pregnancies.</p> <p>The PAPP-A level is low.</p> <p>The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician.</p> <p>Please note that risk calculations are statistical approaches and have no diagnostic value!</p>
