Risks at sampling date				
Age risk at sampling date	1:861	Trisomy 21	1:5114	
Overall population risk	1:600	Trisomy 13/18	<1:10000	
Risk		Trisomy 21		
<p>The graph plots risk (y-axis, 1:10 to 1:10000) against age (x-axis, 13 to 49). A diagonal line represents the 'Cutoff'. The area above the cutoff is red (above cut off), the area below the cutoff is yellow (Below Cut Off, but above Age Risk), and the area below the yellow is green (below cut off). A vertical bar indicates the patient's risk level, which is below the cutoff line.</p>		<p>The calculated risk for Trisomy 21 is below the cut off which represents a low risk. After the result of the Trisomy 21 test it is expected that among 5114 women with the same data, there is one woman with a trisomy 21 pregnancy and 5113 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p>		
Trisomy 13/18				
<p>The calculated risk for trisomy 13/18 is < 1:10000, which indicates a low risk.</p>
