After the result of the Trisomy 21 test it is expected that among 547 women with the same data, there is one woman with a trisomy 21 pregnancy and 546 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!		
which indicates a low risk.			Sign of Physicia	n
