KOS DIAGNOSTIC LAB

| Patient data | | Ultrasound data | | |
|--|--------------|--|---------------------------------|-----------|
| Name | GORA DEVI | Gestational age at sample date | 12 + 0 | |
| Birthday | 20-04-1986 | Method | LMP | |
| Age at sample date | 32 | Scan date | | |
| Patient ID | 211902150004 | | | |
| Correction factors | | | | |
| Fetuses | 1 VF | no | Previous trisomy 21 pregnancies | no |
| Weight in kg | 63 diabetes | no | | |
| Smoker | no Origin | Asian | | |
| Pregnancy data | | Parameter | Value | Corr. MoM |
| Sample Date | 15-02-2019 | PAPP-A | 2.81mIU/ml | 1.14 |
| | | fb-hCG | 19.5 ng/ml | 0.59 |
| Risks at sampling date | | | | |
| Age risk at sampling date | 1:691 | Trisomy 21 | <1:10000 | |
| Overall population risk | 1:600 | Trisomy 13/18 | <1:10000 | |
| Risk | | Trisomy 21 | | |
| <p>The graph plots risk (1:10000 to 1:10) against age (13 to 49). A diagonal line labeled 'Cutoff' separates the green area (below cutoff) from the yellow area (between cutoff and age risk). The area above the cutoff is red.</p> | | <p>The calculated risk for Trisomy 21 is below the cut off which represents a low risk. After the result of the Trisomy 21 test it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p> | | |
| Trisomy 13/18 | | | | |
| <p>The calculated risk for trisomy 13/18 is < 1:10000, which indicates a low risk.</p> | | | | |
