## Down's Syndrome Risk

1:10000

## The calculated risk for Trisomy 21 is below the cut off which represents a low risk.

1315 1719 212325 2729 313335 3739 414345 4749 Age

After the result of the Trisomy 21 test it is expected that among 3855 women with the same data, there is one woman with a trisomy 21 pregnancy and 3854 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!

Neural tube defects risk	Risk for trisomy 18
The corrected MoM AFP (0.76) is located in the low risk area for neural tube defects.	The calculated risk for trisomy 18 is < 1:10000, which indicates a low risk.

below cut off	Below Cut Off, but above Age Risk	above cut off	Prisca 5.0.2.37
