Risk		Trisomy 21		
<p>The graph shows age risk on the y-axis (1:10000 to 1:10) and age on the x-axis (13 to 49). A diagonal line labeled 'Cutoff' separates the risk levels. The area below the cutoff is divided into three zones: green (below 1:1000), yellow (between 1:1000 and 1:100), and red (above 1:100). A vertical bar indicates the patient's risk level at age 32, which is in the green zone.</p>		<p>The calculated risk for Trisomy 21 is below the cut off which represents a low risk. After the result of the Trisomy 21 test it is expected that among 3395 women with the same data, there is one woman with a trisomy 21 pregnancy and 3394 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p>		
Trisomy 13/18				
<p>The calculated risk for Trisomy 13/18 is 1:3036, which indicates a low risk.</p>
