| Name   | MRS. SONIA  | Patient ID  | 101902250031                   |
| Birthday   | 01-03-1990  | Sample ID   | 101902250031                   |
| Age at sample date   | 28.0        | Sample Date   | 25-02-2019                     |
| Gestational age  | 11 + 5      |   |                                |
| Correction factors   |             |   |                                |
| Fetuses  | 1           | IVF   | no                             |
| Weight   | 59          | diabetes  | no                             |
| Smoker   | no          | Origin  | Asian                          |
|  |             | Previous trisomy 21 pregnancies   | no                             |
| Biochemical data   |             | Ultrasound data   |                                |
| Parameter  | Value       | Corr. MoM   | Gestational age                |
| PAPP-A   | 1.47 mIU/ml | 0.53  | 11 + 5                         |
| fb-hCG   | 76.6 ng/ml  | 1.82  | Method                         |
|  |             |   | CRL Robinson                   |
| Risks at sampling date   |             |   | Scan date                      |
| Age risk   |             | 1:906   | 25-02-2019                     |
| Biochemical T21 risk   |             | 1:300   | Crown rump length in mm        |
| Combined trisomy 21 risk   |             | 1:1922  | 58.6                           |
| Trisomy 13/18 + NT   |             | <1:10000  | Nuchal translucency MoM        |
|  |             |   | 0.36                           |
|  |             |   | Nasal bone                     |
|  |             |   | present                        |
|  |             |   | Sonographer                    |
|  |             |   | .                              |
|  |             |   | Qualifications in measuring NT |
|  |             |   | MD                             |
| Risk   |             | Trisomy 21  |                                |
|  |             | <p><b>The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk.</b></p> <p>After the result of the Trisomy 21 test (with NT) it is expected that among 1922 women with the same data, there is one woman with a trisomy 21 pregnancy and 1921 women with not affected pregnancies.</p> <p>The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p> <p>The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)).</p> <p>The laboratory can not hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!</p> |                                |
| Trisomy 13/18 + NT   |             |   |                                |
| <p><b>The calculated risk for trisomy 13/18 (with nuchal translucency) is &lt; 1:10000, which represents a low risk.</b></p> |             |   |                                |
