Overall population risk	1:600	Trisomy 13/18	<1:10000	
Risk		Trisomy 21		
<p>The graph plots risk (y-axis, 1:1000 to 1:10) against age (x-axis, 13 to 49). A diagonal line labeled 'Cutoff' separates the 'below cut off' (green) region from the 'above cut off' (red) region. The patient's risk is indicated by a vertical bar at age 30, which is in the green region.</p>		<p><b>The calculated risk for Trisomy 21 is below the cut off which represents a low risk.</b> After the result of the Trisomy 21 test it is expected that among 6194 women with the same data, there is one woman with a trisomy 21 pregnancy and 6199 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p>		
Trisomy 13/18				
<p><b>The calculated risk for trisomy 13/18 is &lt; 1:10000, which indicates a low risk.</b></p>
