|  |              | Previous trisomy 21 pregnancies  | no                             |
| Biochemical data   |              | Ultrasound data  |                                |
| Parameter  | Value        | Corr. MoM  | Gestational age                |
| PAPP-A   | 4.80 mIU/ml  | 1.33   | 13 + 0                         |
| fb-hCG   | 30.5 ng/ml   | 0.97   | Method                         |
|  |              |  | LMP                            |
|  |              |  | Scan date                      |
| Risks at sampling date   |              |  | Crown rump length in mm        |
| Age risk   |              | 1:1090   | Nuchal translucency MoM        |
| Biochemical T21 risk   |              | <1:10000   | Nasal bone                     |
| Combined trisomy 21 risk   |              | <1:10000   | present                        |
| Trisomy 13/18 + NT   |              | <1:10000   | Sonographer                    |
|  |              |  | Qualifications in measuring NT |
|  |              |  | MD                             |
| Risk   |              | Trisomy 21   |                                |
|  |              | <p><b>The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk.</b></p> <p>After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy.</p> <p>The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p> <p>The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)).</p> <p>The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!</p> |                                |
| Trisomy 13/18 + NT   |              |  |                                |
| <p><b>The calculated risk for trisomy 13/18 (with nuchal translucency) is &lt; 1:10000, which represents a low risk.</b></p> |              |  |                                |
