Age risk at sampling date	1:1024	Trisomy 21	1:3500	
Overall population risk	1:600	Trisomy 13/18	<1:10000	
Risk		Trisomy 21		
<p>The graph plots risk (y-axis, 1:10 to 1:10000) against age (x-axis, 13 to 49). A red area above the cutoff line represents high risk, a yellow area below the cutoff line represents low risk, and a green area below the yellow area represents very low risk. A vertical bar at age 22 indicates the patient's risk, which is in the green area, below the cutoff line.</p>		<p>The calculated risk for Trisomy 21 is below the cut off which represents a low risk. After the result of the Trisomy 21 test it is expected that among 3500 women with the same data, there is one woman with a trisomy 21 pregnancy and 3499 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p>		
Trisomy 13/18				
<p>The calculated risk for trisomy 13/18 is < 1:10000, which indicates a low risk.</p>
