Overall population risk	1:600	Trisomy 13/18	<1:10000	
Risk		Trisomy 21		
<p>The graph plots risk (y-axis, 1:10000 to 1:10) against age (x-axis, 13 to 49). A diagonal line represents the 'Cut off'. The area below the cut-off is green (low risk), the area between the cut-off and the age risk curve is yellow (Below Cut Off, but above Age Risk), and the area above the cut-off is red (above cut off). The patient's risk is indicated by a vertical bar at age 33, which is below the cut-off.</p>		<p>The calculated risk for Trisomy 21 is below the cut off which represents a low risk. After the result of the Trisomy 21 test it is expected that among 2207 women with the same data, there is one woman with a trisomy 21 pregnancy and 2206 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p>		
Trisomy 13/18				
<p>The calculated risk for trisomy 13/18 is < 1:10000, which indicates a low risk.</p>
