<p>The graph shows risk levels on the y-axis (1:1000, 1:1000, 1:250, 1:100, 1:10) and age on the x-axis (13, 15, 17, 19, 21, 23, 25, 27, 29, 31, 33, 35, 37, 39, 41, 43, 45, 47, 49). A red area represents risk above the cutoff, a yellow area represents risk below the cutoff but above the age risk, and a green area represents risk below the cutoff. A vertical bar indicates the patient's risk level, which is in the green area, below the cutoff line.</p>		<p>The calculated risk for Trisomy 21 is below the cut off which represents a low risk. After the result of the Trisomy 21 test it is expected that among 6194 women with the same data, there is one woman with a trisomy 21 pregnancy and 6193 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p>		
Trisomy 13/18		<p>The calculated risk for trisomy 13/18 is < 1:10000, which indicates a low risk.</p>
