Risk		Trisomy 21		
<p>The graph plots risk (y-axis, 1:10 to 1:10000) against age (x-axis, 13 to 49). A diagonal line labeled 'Cutoff' separates the 'above cut off' (red) region from the 'below cut off' (yellow and green) regions. The patient's risk is indicated by a vertical bar at age 26, which is below the cutoff line.</p>		<p><b>The calculated risk for Trisomy 21 is below the cut off which represents a low risk.</b> After the result of the Trisomy 21 test it is expected that among 6177 women with the same data, there is one woman with a trisomy 21 pregnancy and 6176 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p>		
Trisomy 13/18				
<p><b>The calculated risk for trisomy 13/18 is &lt; 1:10000, which indicates a low risk.</b></p>
