<p>The graph shows age risk on the y-axis (1:1000 to 1:10) and age on the x-axis (13 to 49). A diagonal line labeled 'Cutoff' separates the risk into three zones: green (below cutoff), yellow (below cutoff but above age risk), and red (above cutoff). A vertical bar indicates the patient's risk at age 29, which is in the green zone.</p>		<p><b>The calculated risk for Trisomy 21 is below the cut off which represents a low risk.</b></p> <p>After the result of the Trisomy 21 test it is expected that among 6177 women with the same data, there is one woman with a trisomy 21 pregnancy and 6176 women with not affected pregnancies.</p> <p>The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p>		
Trisomy 13/18				
<p><b>The calculated risk for trisomy 13/18 is &lt; 1:10000, which indicates a low risk.</b></p>
