Overall population risk	1:600	Trisomy 13/18	<1:10000	
Risk		Trisomy 21		
<p>The graph shows risk levels on the y-axis (1:10, 1:100, 1:250, 1:1000, 1:10000) and Age on the x-axis (13, 15, 17, 19, 21, 23, 25, 27, 29, 31, 33, 35, 37, 39, 41, 43, 45, 47, 49). A vertical line at age 31 is labeled 'Cut off'. The area above the cut-off is red, the area below the cut-off and above the age risk curve is yellow, and the area below the age risk curve is green.</p>		<p>The calculated risk for Trisomy 21 is below the cut off which represents a low risk. After the result of the Trisomy 21 test it is expected that among 259 women with the same data, there is one woman with a trisomy 21 pregnancy and 258 women with not affected pregnancies. The free beta HCG level is high. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p>		
Trisomy 13/18				
<p>The calculated risk for trisomy 13/18 is < 1:10000, which indicates a low risk.</p>
