## KOS DIAGNOSTIC LAB 6349/1, NICHOLSON ROAD, AMBALA CANTT

Prisca 5.0.2.37

Date of report: 14-06-2019

| Patient data   |                   |   |  |  |
|--|-------------------|---|--|--|
| Name M   | MRS. SANDEEP KAUR |   | 1906220512/AMB   |  |
| Birthday   | 12-03-1991        | Sample ID                                     | 1906220512/AMB   |  |
| Age at sample date   | 28.3              | Sample Date                                   | te 13-06-2019  |  |
| Gestational age  | 12 + 2            |   |  |  |
| Correction factors   |                   |   |  |  |
| Fetuses 1  | IVF               | no  | Previous trisomy 21 no   |  |
| Weight 65.5  | diabetes          | no  | pregancies   |  |
| Smoker no  | Origin            | Asian   |  |  |
| Biochemical data Ultrasou  |                   |   | asound data  |  |
| Parameter Value  | Corr. MoM         | Gestational                                   | age 12 + 0   |  |
| PAPP-A 1.46 mIU/m  | ol.51             | Method  | CRL Robinson   |  |
| fb-hCG 140 ng/ml   | 3.41              | .41 Scan date 11-06-2019                      |  |  |
| isks at sampling date  |                   | Crown rump length in mm 55.5                  |  |  |
| Age risk   | 1:771             |   |  |  |
| Biochemical T21 risk   |                   |   | Nasal bone present   |  |
| •  |                   | Sonographer .                                 |  |  |
| -  |                   | Qualifications in measuring NT MD  Trisomy 21 |  |  |
| 1:1000<br>1:1000<br>1:10000<br>1:10000<br>1:15 1719 212325 27 29 313335 3739 414345 4749 |                   |   | The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk.  After the result of the Trisomy 21 test (with NT) it is expected that among 334 women with the same data, there is one woman with a trisomy 21 pregnancy and 333 women with not affected pregnancies.  The free beta HCG level is high.  The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician.  Please note that risk calculations are statistical approaches and have no diagnostic value!  The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)).  The laboratory can not be hold responsible for their impact on the risk assessment! Calculated risks have no diagnostic value! |  |
