<p>The graph plots risk ratios on the y-axis (1:100, 1:1000, 1:250, 1:100, 1:10) against age on the x-axis (13 to 49). A diagonal line represents the 'Cutoff'. The area below the cutoff is green, the area between the cutoff and the age risk curve is yellow, and the area above the cutoff is red. A vertical bar at age 31 indicates the patient's risk, which is in the green zone.</p>		<p>The calculated risk for Trisomy 21 is below the cut off which represents a low risk.</p> <p>After the result of the Trisomy 21 test it is expected that among 2860 women with the same data, there is one woman with a trisomy 21 pregnancy and 2859 women with not affected pregnancies.</p> <p>Thecalculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p>
