Overall population risk	1:600	Trisomy 13/18	<1:10000	
Risk		Trisomy 21		
<p>The graph plots risk (1:1000 to 1:10) against age (13 to 49). A diagonal line represents the 'Cutoff'. The area below the cutoff is green, the area between the cutoff and the age risk curve is yellow, and the area above the cutoff is red. The age risk curve is at 1:1000, and the overall population risk is at 1:600.</p>		<p>The calculated risk for Trisomy 21 is below the cut off which represents a low risk. After the result of the Trisomy 21 test it is expected that among 6210 women with the same data, there is one woman with a trisomy 21 pregnancy and 6209 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p>		
Trisomy 13/18		<p>The calculated risk for trisomy 13/18 is < 1:10000, which indicates a low risk.</p>
