| Risks at term   |   | Crown rump length in mm 44  |                        |  |
| Age risk  | 1:1050  | Nuchal translucency MoM 0.98  |                        |  |
| Biochemical T21 risk  | 1:704   | ,   |                        |  |
| Combined trisomy 21 risk  | -   |   | Sonographer .          |  |
| Trisomy 13/18 + NT  |   |   | ns in measuring NT MD  |  |
| Risk 1:10 Trisomy 21 The calculated risk for Trisomy 21 (with   |   |   |                        |  |
| 1:1000<br>1:1000<br>1:1000<br>1:1000<br>1315 1719 212325 27/3 31333<br>Trisomy 13/18 + NT<br>The calculated risk for trisomy 13 translucency) is < 1:10000, which risk. | Cut off  S 3739 414345 4749 Age  B/18 (with nuchal a represents a low | translucency) is below the cut off, which indicates a low risk.  After the result of the Trisomy 21 test (with NT) it is expected that among 2872 women with the same data, there is one woman with a trisomy 21 pregnancy and 2871 women with not affected pregnancies.  The free beta HCG level is high.  The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!  The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)).  The laboratory can not be hold responsible for their impact on the risk assessment! Calculated risks have no diagnostic value! |                        |  |
