

Immuno Diagnostics Pvt. Ltd.

Leading Immuno Assays Laboratory of Northern India

NABL ACCREDITED & ISO 9001:2015 CERTIFIED LABORATORY

Reference No.	: - 1912220171	Age/Gender	: 28 Yrs/Female
Pt's Name	: Mrs. JULEKHA		AMB-KOS
Referred By	: NA		
Sample Collection Date/Time	: 06-Dec-2019	Date	:06-Dec-2019
Sample Receiving Date/Time	: 06-Dec-2019 03:52AM	Approval Date	:07-Dec-2019 09:57AM
Sample From	: KOS DIAG LAB	Report Print Time	:21-Dec-2019 09:12PM

MICROSCOPY

Test Description	Observed Value	Biological Reference Interval
	Anti Nuclear Abs-IFA, Hep2 Serum	
ANA (IF)* Method : Immunofluorescence Microscopy	NEGATIVE	Negative

Test Method (s)

ANTI-NUCLEAR AB-IFA, HEP2, SERUM - The Immunofluorescence assay Is the Gold standard method for ANA testing. A negative ANA test virtually rules out a diagnosis of Systemic Lupus Erythematosus but a positive test may be Indicative of a number of autoimmune connective tissue diseases such as Scleroderma, Rheumatoid Arthritis and Sjogren's syndrome. When correlated with the Clinical history & physical examination, It Identifies almost all pts. With SLE (Sensitivity < 95%). Population studies show positive ANA In approximately 1-5% of healthy subjects. False positive results for ANA can be seen in pts. Taking certain medications like- hydralazine, isoniazid, procainamide etc. ANA test carried out by Immunofluorescence assay using HEP-2 slide (Tissue culture substrate) Is more sensitive and specific than ANA carried out by enzyme immunoassay.

TITRE

ANA positivity of greater than or equal to 1:160 titre is of clinical significance In diagnosis of Collagen Vascular Disorders. Upto 40 % of elderly subject with chronic non-rheumatological illness have ANA positivity usually at low titre (1: 40-1:160)

PATTERN

The ANA pattern seen on Immunofluorescence staining helps in determination of the antibody specificities which need to be confirmed by Immunoblot techniques.

1+ Positivity = Minimum Immunofluorescence (IF) of no significance.

2+ Positivity = Mildly positive, clinically insignificant.

3+ Positivity = Significant positive, needs clinical correlation.

4+ Positivity = Strong positive, highly suggestive of collagen vascular disease. A titre estimation helps to monitor response to treatment.

PLEASE NOTE: ALL ANA RESULTS WILL BE REPORTED WITH FINAL END POINT TITRE VALUE.

EXAMINATION OF BLOOD

Location	Pattern	Target Antigen	Clinical Association
Nucleus	Homogeneous	Double strand DNA His tones Nucleosome, RNA, Single Strand DNA	SLE Drug Induced Lupus , SLE , RA SLE, MCTD, RA, PM, DM, SS
	Speckled	Sm U1-snRNP SSA/Ro SSB/La Ku Cyclin I (PCNA) Mitosis/Cyclin II	SLE MCTD, SLE, RA, sharp syndrome Sjogren's syndromes (SS)/SLE/Neonatal Lupus PM/DM/SLE/SS SLE/Overlap Syndromes DM
	Dense Fine Speckled (DFS)	Lens epithelium-derived growth factor (LEDGF), DNA binding transcription coactivator p75. (DFS-70)	Healthy individuals , Various Inflammatory conditions like atopic dermatitis, interstitial cystitis, Asthma.
	Centromeres	Proteins of Kinetochores	sCREST syndrome, PSS limited form

Dr. Ajay Kumar

Ph.D. (BARC)
Specialisation in Thyroid Physiology

Dr. Rohini Bhatia

M.B.B.S., M.D. (Pathology)
Hony Consultant Pathologist

Dr. Malti Goyal

M.B.B.S., M.D. (Path)
Hony Consultant Pathologist

109, Pocket D&E Shopping Complex, Sarita Vihar, New Delhi-110 076

All results should be co-related clinically; if results are alarming or unexpected, contact the laboratory immediately. Not valid for Medico-Legal. Result pertain to the specimen submitted. The Tests with an * are not accredited by NABL.
