Risk			Trisomy 21
1:10			<b>The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk.</b>
<p>The chart shows age risk on the x-axis (13-49) and risk on the y-axis (1:10000 to 1:100). A diagonal line represents the cut-off. The area below the cut-off is green, the area between the cut-off and the age risk curve is yellow, and the area above the cut-off is red. The patient's risk is indicated by a vertical bar at age 27, which is in the green region.</p>			<p>After the result of the Trisomy 21 test (with NT) it is expected that among 3086 women with the same data, there is one woman with a trisomy 21 pregnancy and 3085 women with not affected pregnancies. The free beta HCG level is high.</p> <p>The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p> <p>The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)).</p> <p>The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!</p>
Trisomy 13/18 + NT			
<p><b>The calculated risk for trisomy 13/18 (with nuchal translucency) is &lt; 1:10000, which represents a low risk.</b></p>
