Risk		Trisomy 21	
<p>The graph plots risk (y-axis, 1:10000 to 1:10) against age (x-axis, 13 to 49). A diagonal line represents the 'Cut off'. The area below the cut-off is green (low risk), the area between the cut-off and the age risk curve is yellow (Below Cut Off, but above Age Risk), and the area above the cut-off is red (above cut off). The patient's risk is indicated by a vertical bar at age 34.2, which is below the cut-off line.</p>		<p><b>The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk.</b></p> <p>After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy.</p> <p>The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p> <p>The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)).</p> <p>The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!</p>	
		<p><b>The calculated risk for trisomy 13/18 (with nuchal translucency) is &lt; 1:10000, which represents a low risk.</b></p>
